YES  It is intended that the building described above will be constructed in compliance with the community's flood plain ordinance. The certifier may rely on community records. The lowest floor (including basement) will be at an elevation of 11.01 feet, NGVD. Failure to construct the building at this elevation may place the building in violation of the community's flood plain management ordinance.

NO  The building described above has been constructed in compliance with the community's flood plain management ordinance based on elevation data and visual inspection or other reasonable means.  
If NO is checked, attach copy of variance issued by the community.

SECTION II ELEVATION CERTIFICATION (Certified by a Local Community Permit Official or a Registered Professional Engineer, Architect, or Surveyor.)

FIRM ZONE A1-A30: I certify that the building at the property location described above has the lowest floor (including basement) at an elevation of 12.01 feet, NGVD (mean sea level) and the average grade at the building site is at an elevation of 8.75 feet, NGVD.

FIRM ZONES V, V1-V30: I certify that the building at the property location described above has the bottom of the lowest floor beam at an elevation of        feet, NGVD (mean sea level), and the average grade at the building site is at an elevation of        feet, NGVD.

FIRM ZONES A, A89, AH and EMERGENCY PROGRAM: I certify that the building at the property location described above has the lowest floor elevation of        feet, NGVD. The elevation of the highest adjacent grade next to the building is        feet, NGVD.

FIRM ZONE AO: I certify that the building at the property location described above has the lowest floor elevation of        feet, NGVD. The elevation of the highest adjacent grade next to the building is        feet, NGVD.

SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect)

I,       , in the best of my knowledge, information, and belief, that the building is designed so that the building is watertight, with walls substantially impermeable to the passage of water and structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures, velocities, impact and uplift forces associated with the base flood.

YES  NO  In the event of flooding, will this degree of floodproofing be achieved with human intervention?  
(Human intervention means that water will enter the building when floods up to the base flood level occur unless measures are taken prior to the flood to prevent entry of water (e.g., bolting metal shutters over doors and windows).

Will the building be occupied as a residence?  
YES  NO  If YES, the building will be occupied as a residence. Complete with the elevation and floodproofing cert features.
